

<u>EX NO:6</u>	<u>E-TICKETING</u>
<u>DATE:23/1/26</u>	

AIM:

To draw the diagrams [usecase, activity, sequence, collaboration, class, statechart, component, deployment, package] for the E-ticketing system.

SOFTWARE REQUIREMENTS SPECIFICATION:

	SOFTWARE REQUIREMENTS SPECIFICATION
1	Hardware Requirements
2	Software Requirements
3	Problem Analysis and Project Plan
4	Project Description
5	Reference

1.0 HARDWARE REQUIREMENTS:

Intel Pentium Processor I3/I5

1.1 SOFTWARE REQUIREMENTS:

Rational rose / Argo UML

1.2 PROBLEM ANALYSIS AND PROJECT PLANNING

In the E-Ticketing system the main process is a applicant have to login the database then the database verifies that particular username and password then the user must fill the details about their personal details then selecting the flight and the database books the ticket then send it to the applicant then searching the flight or else cancelling the process

1.3 PROJECT DESCRIPTION:

This software is designed for supporting the computerized e-ticketing. This is widely used by the passenger for reserving the tickets for their travel. This E-ticketing is organized by the central system. The information is provided from the railway reservation system.

1.4 REFERENCES:

IEEE Software Requirement Specification format.

USE CASE DIAGRAM:

This diagram will contain the actors, use cases which are given below

Actors: Passenger, Railway reservation system..

Use case: Status, reservation, cancellation, enter the train number, enter the number of seats, availability of seats, acceptance of ticket.

CLASS DIAGRAM:

This diagram consists of the following classes, attributes and their operations.

CLASSES	ATTRIBUTES	OPERATIONS
Central computer	Train name, Passenger name	Reservation(), login()
Passenger	Passenger age	Login()
Railway reservation system	Train number	Cancellation()

ACTIVITY DIAGRAM:

This diagram will have the activities as Start point, End point, Decision boxes as given below

Activities: enter the train number, enter the number of seats, acceptance of ticket, accept seat.

Decision box: Check availability of seats whether it is present or not.

SEQUENCE DIAGRAM:

This diagram consists of the objects, messages and return messages.

Object: Passenger, Railway reservation system, Central computer.

COLLABORATION DIAGRAM:

This diagram contains the objects and actors. This will be obtained by the completion of the sequence diagram and pressing the F5 key.

DEPLOYMENT DIAGRAM:

A deployment diagram in the unified modeling language serves to model the physical deployment of artifacts on deployment targets. Deployment diagrams show "the allocation of artifacts to nodes according to the Deployments defined between them. It is represented by a 3- dimensional box. Dependencies are represented by a communication association.

PACKAGE DIAGRAM:

A package diagram in unified modeling language that depicts the dependencies between the packages that make up a model. A Package Diagram (PD) shows a grouping of elements in the OO model, and is a Cradle extension to UML. PDs can be used to show groups of classes in Class Diagrams (CDs), groups of components or processes in Component Diagrams (CPDs), or groups of processors in Deployment Diagrams (DPDs).

There are three types of layer. They are

1. User interface layer
2. Domain layer

3. Technical services layer

PROGRAM

CODING:

PASSENGER:

Public class passenger

{

Public integer passenger
passenger name; Public integer
passenger passenger age;
Public integer train no;

Public void passenger()

{

}

Public void new operation()

```
{  
}  
}
```

CENTRAL MANAGEMENT SYSTEM:

Public class central management

```
{  
  
    Public integer train  
    name; Public integer  
    passenger name;  
    Public void  
    reservation()  
  
    {  
    }  
    Public void cancellation()  
  
    {  
    }  
    Public void status()  
  
    {  
    }  
    Public void login()  
  
    {  
    }  
    Private void management()  
  
    {
```

```

    }
}

RAILWAY RESERVATION SYSTEM:

Public class railway reservation system
{
    Public integer
    trainno;

    Public integer train name;

        Public integer
        passenger name;
        Public void status()

    {

    }

    Public void reservation()

    {

    }

    Public void cancellation()

    {

    }

    Public void railway reservation system()

    {

    }

}

```

RESULT:

Thus the diagrams[use case, activity, sequence, collaboration, class, statechart, component, deployment, package] for the E-ticketing system have been designed, executed and output is verified.
